15 Description of Equipment or Protective System

The Type KFD0-SD2-Ex Series Transformer Isolated Solenoid Drivers are designed to transfer current from unspecified apparatus located in the non-hazardous area to the hazardous area. The voltage and current passed to the hazardous area are limited to intrinsically safe levels and have linear characteristics. The hazardous area circuit is galvanically isolated from the non-hazardous area circuit using transformers.

The Type KFD0-SD2-Ex Series Transformer Isolated Solenoid Drivers comprise a number of electronic components, including isolating transformers, fuses, zener diodes and resistors all mounted on printed circuit boards and housed in a plastic enclosure with polarised plug-in terminals for hazardous and non-hazardous area connections. LED indication is provided for channel status.

There are single and dual channel models of the apparatus. The dual channel versions have two printed circuit boards fitted and are denoted by '2' after 'Ex' in the model number. The digits at the end of the model number denote the voltage and current limit of the apparatus. The following models are in the range: -

KFD0-SD2-Ex1.1045
 KFD0-SD2-Ex2.1045
 KFD0-SD2-Ex1.1245
 KFD0-SD2-Ex2.1245
 KFD0-SD2-Ex1.1065
 KFD0-SD2-Ex2.1065
 KFD0-SD2-Ex1.10100
 KFD0-SD2-Ex1.1180 ([Ex ia Ga] IIB only)
