<b>Intended application</b>	Signal conditioners / isolated barriers are used for galvanic isolation between field circuits and control circuits. They transfer analogue current signals into isolated current/voltage signals. The 1-channel and 2-channel devices fulfill the requirements for SIL 2, the splitter devices for SIL 3, both for low and high demand mode of operation. They can be used in applications up to these safety levels.		
<b>Specific requirements</b>	The instructions of the associated safety manual, system manual and instruction manual shall be considered. In SIL 3 applications the connected safety system has to initiate a fault state in case the 2 output signals differ by more than 2%. The input signals have to be provided by a SIL 3 transmitter.
