1 Input voltage (sensor supply):

inputs are supplied by ASi or by AUX (auxiliary 24 V power). If supplied by ASi, inputs shall not be connected to earth or to external potential.

outputs are supplied by ASi or by AUX (auxiliary 24 V power). If supplied by ASi, outputs shall not be connected to earth or to external potential.

3 ASi connection:

the connection to ASi as well to AUX (auxiliary 24 V power) is made via yellow resp. black ASi profile cable with piercing technology or via M12 socket (in IP20 via clamps).

4 ASi Address:

Block diagram

As long as the F-logic has - by means of the safe ASi output slaves- released, the physical outputs can be switched via the data bits of the 4I/4O slaves via standard control. If the release is omitted, the physical outputs will be switched off safely.

All 8 physical outputs can be released jointly by a safe ASi output slave. However, it is also possible to install one safe ASi output slave for each single physical output. Each intermediate setting is possible, e.g. one safe ASi output slave for 2 physical outputs.
