S311G

4-DIGIT DIGITAL INDICATOR / SIGNAL GENERATOR WITH UNIVERSAL ANALOG INPUT

Highlights

- **Power Supply 80-265 Vac o 10-40 Vdc / 19-28 Vac**
- **4-digit LED display, high brightenss**
- **Analog Input: mA, V, Ohm, Anti-bumper filter**
- **Signal generator function**
- **Automatic / Manual operating mode**
- **Settings by front keys**

S311G is a digital indicator with analog input and voltage / current generator. There are 2 different operating modes. In automatic mode S311G measures an analog value and retransmits it to the output.
In manual mode a setpoint is turned into a generated value by the output.
In manual mode and switching from automatic to manual mode (or vice versa) it is available a signal attenuation feature (antibumper) in order to avoid actuator hammer or dangerous voltage / current surges.
S311G is a digital indicator with universal input including voltage, current and potentiometer.
The device is expandable with optional ModBUS board and allows programmable re-transmision of measured value on isolated analog output in voltage or current mode.
