International Approvals

- 1 Two Independent Elastomeric Exd flameproof seals on cable outer sheath – The double seals provide superior cable retention over standard unarmoured Cable Glands
- 2 Rounded Cable entry to prevent cable damage

The 501/423 dual certified Exe/Exd cable gland incorporates two independent seals and is intended for use on non-armoured elastomer and plastic insulated cables. This cable gland may be used with braided cables where the braid and outer sheath pass into the enclosure. For Exd application the cable must be suitable inline with 60079-14. The braid must then be suitably terminated inside the enclosure. The two seals provide superior cable retention over standard unarmoured cable glands. See technical section for installation rules and regulations.
